

CALVIN RISTAD

137 Parkside Dr, Princeton, NJ 08540 | 609-346-6360 | calvin@ristad.org | [GitHub](#)
Application developer specializing in dashboarding, workflow automation, and AI

EDUCATION

RUTGERS UNIVERSITY

B.S. Computer Science

Graduated magna cum laude | Major GPA: 3.9 | GPA: 3.8

New Brunswick, NJ
Fall 2021 - Spring 2025

WORK EXPERIENCE

JOHNSON & JOHNSON

Software Engineering Contractor - Application Development

Titusville, NJ
July 2025 - Present

- Developing a web interface for the MARCH centralized model archival and retrieval system, providing role-based access control, version-controlled model storage, and model exploration tools
- Building Dockerized web app in Python that retrieves manufacturing data from Databricks and automatically generates editable model maintenance reports with charts, statistical analyses, and narrative summaries
- Built guardrailed GenAI agent to extract structured data from handwritten paper batch records with 1/20th the error of Copilot alone. Built companion app which greatly sped up the human review process versus manual extractions
- Extended the application framework built during my Co-Op to include interactive documentation, integration with Jenkins CI/CD, Databricks/Teradata connection, FastAPI support, and HTMX interactivity
- Built and deployed Design Space tool to find possible delivery device combinations based on product specifications, component tolerances, validation statuses, and site manufacturing capabilities
- Created web app to model filter adsorption and optimize filling processes based on experimental data
- Built and deployed MSAT pathmapper tool to better help users find points of contact within my organization
- Helped complete and deploy a Bokeh dashboard for monitoring process variables for intensified perfusion project

JOHNSON & JOHNSON

Process Science, Modeling and Data Co-Op

Titusville, NJ
May 2024 - Nov 2024

- Sped up app development in my team by creating a new Python application framework and J&J brand-compliant UI component library using Jinja and Flask
- Centralized site-to-site tech transfer data within J&J into a single application, allowing users to view technologies used and connect with relevant in-house experts
- Implemented mechanistic cell growth model using FilterPy unscented Kalman filters that outperformed linear regression, XGBoost, CART, and SVM for prediction accuracy on trial data
- Led the 28 person intern community within my group; organized guest speakers to share career insights

PROJECTS

OURFREEPANTRY.ORG

Spring 2026 -Present

- Created [free app](#) to help people find free food near them tailored to their cultural and dietary needs, using Gemma4 visual language model to infer pantry inventories from uploaded pictures and Firebase to maintain those inventories

WEB-BASED MULTIPLAYER GAMES

Fall 2017 - Spring 2025

- Created, developed, and launched 14 different multiplayer browser games including *Shotwars.io* and *Mineparkour.club*, accumulating over 6 million plays
- Designed and implemented web game portal *Insanegames.io* with streamlined submission/review pipeline. Managed cloud hosting, database, google analytics and API maintenance. At the time of sale, it had over 100k views per week

DATA VISUALIZATION

Fall 2022 -Present

- Built a scalable, high-performance web crawler and GUI for VarietySplash productions using Electron.js
- Created additional data visualization apps including [mapping Wawa locations by service](#) (2025); [Mathematical macronutrient optimizer using GLPK and WASM](#) (2025); [Rutgers bus arrival time visualization with Seaborn](#) (2024); [restaurant waiting time with Matplotlib](#) (2025) and a [FrameNet explorer](#) (2025);

SPORTS ANALYTICS

Fall 2022 - Fall 2024

- Developed high school swim lineup optimizer; presented research at CASSIS 2024 Vancouver
- Developed Bayesian approach to ranking elite youth triathletes that greatly outperformed USAT points system

SKILLS

Core Skills: Python, JavaScript, React, Git, Docker, PyTorch, Node.js, Solidity, Copilot

Supporting Skills: CSS, Next.js, Three.js, Java, C#, SQL, Linux CLI, Tailwind.css, AWS, Google Cloud, Tensorflow, OpenCV, Express, Flask, Unity, REST APIs, Artifactory, Apache Spark, Tableau, Power BI, Plotly, LLMs / RAG
